Student Instructions

- Show your work and justify your answers for all questions unless stated otherwise.
- Organize your work in a reasonably neat and coherent way.
- **Simplify your answers** unless explicitly stated otherwise.
- Fill in circles completely. Do not use check marks, X's, or any other marks.
- Calculators, notes, cell phones, books are not allowed.
- Use dark and clear writing: your exam will be scanned into a digital system.
- Exam pages are double sided. Be sure to complete both sides.
- Leave a 1 inch border around the edges of exams.
- The last page is for scratch work. Please use it if you need extra space.
- This exam has 8 pages of questions.

You do not need to justify your reasoning for questions on this page.

1. (a) (8 points) Suppose A is a real $m \times n$ matrix and $\vec{b} \in \mathbb{R}^m$ unless otherwise stated. Select **true** if the statement is true for all choices of A and \vec{b} . Otherwise, select **false**.

true false

- \bigcirc If A is $n \times n$ and has LU-factorization A = LU, then U is invertible.
- If $AB\vec{x} = \vec{0}$ has a nontrivial solution and B is not the zero matrix, then A is not invertible.
- If T is a one-to-one linear transformation $T: \mathbb{R}^4 \to \mathbb{R}^4$ and \mathcal{H} is the set of vectors \vec{b} such that $T(\vec{x}) = \vec{b}$ for some $\vec{x} \in \mathbb{R}^4$, then $\dim \mathcal{H} = 4$.
- If \vec{v} is an eigenvector of A with eigenvalue $\lambda = 4$, then $2\vec{v}$ is an eigenvector of A with eigenvalue $\lambda = 8$.
- If \vec{v} and \vec{w} are eigenvectors of a square matrix A with the same eigenvalue and $\vec{v} \neq -\vec{w}$, then $\vec{v} + \vec{w}$ is also an eigenvector of A.
- If A and B are $n \times n$ matrices with $det(AB) \neq 0$, then A and B are row equivalent.
- \bigcirc If \vec{x} and \vec{y} are probability vectors, then $\vec{x} + \vec{y}$ is a probability vector.
- If A and B are $n \times n$ and $det(AB) = \frac{1}{2}$, then A is invertible.
